

Contract Manufacturing Request Puzzle & Maze Guides

System signals user whether they are getting closer or further from the desired result. Software and hardware puzzles can be any number of dimensions, and be in such forms as Rubik's Cubes. To be more interesting, there can be multiple routes to solving the puzzle or getting through the maze. Short cuts would be identified with a green light; while longer routes can light up yellow; and red lights show dead ends. Once a person has mastered the puzzle or maze, they can play it without the guide. People of all ages learn how to tackle tough puzzles and mazes through sample games, or the actual puzzle or maze they will be replaying later without the guide.
