GPS Distance Collar

Ever wish that your dog could talk to you. This smart sensory device senses what your dog is doing and the appropriate recorded response is given. Now your pet can communicate even better. We are working on one for babies!

GPS Distance Collar When a pet gets close to its food bowl or touches the food bowl the sensor on its collar comes into contact with the bowl and a pre-recorded voice states "I'm hungry". When the sensor on the pet's collar comes close enough to the closed front door, another pre-recorded voice could say "I need to go outside". Also, what if when the door opens and a pet runs up to its owner the sensor takes note of the pet approaching the open door and a voice could say "Hi Mommy" "Hi Daddy" "I missed you" or something else of the sort.
